- Compilation of a report.

8. Brief description of the humanitarian project:

Under the conditions of informatization of society, the importance of solving informational problems of the blind increases even more: the pace of updating information and the requirements for speed of information exchange increase, the possibility of active participation in public information exchange is having an increasing influence on the quality of life of an individual. In such a situation, to create a favorable environment for persons with visual impairment and to ensure their competitiveness in the field of educational or other intellectual activity, it is necessary to give them a tool that ensures reliable and prompt exchange of information with the surrounding society. Such a tool can and should be served by specialized computer technologies for the blind and visually impaired (typhlotechnologies).

In modern conditions, one of the most important factors for ensuring social adaptation and full integration into the society of the visually impaired is the development of the tiflokompetization process — the introduction of computer technologies adapted for the blind and visually impaired.

9. The total volume of financing (in US dollars) – 74 140
